[PORTFOLIO WEBSITE](#)

Education

Bachelor of Software Engineering (Co-Op)

Sep 2024 – Apr 2028 (expected)

McGill University, Montreal, QC

- Relevant course work: Model-based Programming, Intro to Software Engineering, Introduction to Software Systems, Communication in Engineering
- CGPA: 3.86

Skills

Programming languages: Java, TypeScript, Angular, React, Python, HTML, CSS, C++

Tools & Technologies: Git, Github, Jira, TeamCity, Gherkin (testing), Docker

Languages: English (Full Professional), French (Full Professional), Mandarin (Native), Cantonese (Native)

Software Engineering Experiences

DevOps Intern – TS Imagine – Internship

May 2026 – Aug 2026

- Developed an internal release management tool using **Java Spring Boot** and **Angular**, integrating different APIs (BitBucket, Jira, MS Teams, etc) into a single platform to automate release workflows.
- Implemented low-latency backend optimizations using parallel API calls and data caching, preventing rate-limiting issues and significantly accelerating application responsiveness.
- Improved the Docker configuration of an app to package essential build dependencies directly into container images, enabling automated in-container build and execution workflows in production.
- Containerized and deployed a new application using **Kubernetes**, resolving complex staging configuration issues to establish a reliable baseline for future production releases.

Java Developer Intern – TS Imagine – Internship

Sep 2025 – Dec 2025

- Built and maintained backend application logic in **Java** within internal codebases.
- Implemented frontend features using React (**TypeScript**) and wrote integration tests to ensure functionality and reliability.
- Wrote Gherkin (**Cucumber**) integration tests for regression testing to continuously validate application behavior.
- Delivered tickets on schedule by following structured workflows and managing tasks through Jira.

Projects

StockMounts – Stock Prediction Application (Personal project)

Jun - Jul 2025

- Built full-stack stock predictor with **React**, featuring interactive stock charts and secure user authentication (including GitHub OAuth), allowing users to manage private stock notes.
- Implemented RESTful APIs with **Express** and **MongoDB** for robust data and user management.
- Trained machine learning-based stock prediction models using **scikit-learn** and served them through **Python**-based **FastAPI** microservices, with **Redis** used for backend rate limiting.
- Containerized the app with **Docker** and deployed at <https://stockmounts.onrender.com>.

GM Platform – Individual platformer game – (Personal project)

May 2025

- Wrote the game logic using **Gamemaker language** (player movement, collision mechanics)
- Designed in-game levels and drew all sprites using **Aseprite**, a software for pixel art design.
